

CASE STUDIES

SPRAYED COATING REMOVED

1000m² of sprayed coatings was removed from a car park situated beneath an occupied office block. An asbestos removal enclosure was formed using Pyeroy's own asbestos licensed scaffold division. Access to/from office space above was unaffected by our operations.

PUBLIC & HISTORIC BUILDINGS

Pyeroy are approved contractors to many local authorities and public sector agencies, undertaking works in a variety of locations such as leisure centres, shopping centres, schools and historical buildings. In many cases work continued while facilities remained open.

OFFSHORE PLATFORM

An asbestos removal project was undertaken on a fully operational platform utilising a specially designed decontamination unit and equipment to meet offshore safety requirements. We have undertaken offshore related work nationally in the North Sea and internationally in the Arabian Gulf.

DISTILLERIES & BREWERIES

Pyeroy has been retained by a major distillery for a wide range of asbestos removal and encapsulation projects at various locations throughout the UK. Works are performed to suit production schedules, which keeps any impact caused by asbestos remediation activities to an absolute minimum.

FLY TIPPING

As a fully authorised asbestos removal contractor with a dedicated waste transfer station, Pyeroy has the capability to deal with fly tipping problems and the unauthorised dumping of hazardous materials immediately.

LIVE BOILER ROOM

Our client required a full asbestos removal programme to be undertaken without shutting down the boiler equipment. A full heat stress monitoring programme and work/rest regimes were instigated and suitable methodology agreed with the HSE that enabled work to commence and the boiler room to continue to function normally.

ASBESTOS REMOVAL

UNDERSTANDING THE PROBLEM

The versatility, strength, heat and chemical resistance of asbestos made it one of the most widely used materials. It was used literally everywhere – in cement, as insulation and lagging for tanks, boilers etc, in boards and roofing, and in fireproofing products for commerce, industry and the home. There is no register of its use, and an asbestos survey is a virtual pre-requisite before renovation or demolition of any pre 1980s construction.

Asbestos is responsible for more occupationally related deaths than any other single cause. It is estimated that in the UK 4,500 people die from asbestos related diseases annually. There is no safe exposure level to any of the three types of asbestos: Blue asbestos (Crocidolite), Brown (Amosite) and White (Chrysotile).

Fully authorised for all stages of asbestos assessment, management, encapsulation, removal and disposal.

PYEROY DELIVERING THE SAFE SOLUTION

As a fully licensed asbestos removal and treatment company, Pyeroy is also fully committed to the health and safety of our staff and all other on-site personnel. We have an excellent track record in this area and through on-going training of all staff we ensure our operations incorporate the latest innovative techniques in removal of asbestos.

In most circumstances we can conduct a building or site survey within 24 hours, then develop an action plan to make the site safe. Depending on the degree of the problem, rooms can be sealed and barriers erected before our fully equipped and protected

personnel tackle the problem. This may involve removal by wet stripping techniques or by encapsulation using specialist coatings.

Enclosures fitted with extraction units and under negative pressure, ensure fibres are not released from the work area during asbestos removal works. All removed material is then transported by approved carriers to licensed landfill sites.

At all times, health and safety is the prime directive, and all projects are managed and delivered to ISO 9001.

Operations compliant with CAR2006 and all relevant health and safety requirements.

COMPANY & SERVICES OVERVIEW

Pyeroy is one of the UK's leading specialist asbestos removal and management companies. We provide a total service to clients that covers:

- Site surveys and supporting scientific analytical services
- Asbestos management services
- Asbestos removal and disposal
- Waste management and environmental services to investigate and control associated asbestos contamination of land, air and water
- A full range of in-house ancillary services including:
 - i) scaffold and specialist access
 - ii) insulation services
 - iii) specialist coatings
 - iv) building services
 - v) high pressure water washing
 - vi) industrial cleaning
- Full consultancy services including:
 - i) project specifications
 - ii) method statements
 - iii) risk assessment
 - iv) project tender documentation
 - v) tender evaluation services
 - vi) full CDM Regulation Management

This in-depth capability allows Pyeroy to react quickly to any project and to identify the most appropriate, safe and cost-effective solution without delay – and with minimal disruption to other on-site contracting or building works.

All services are directed by a highly experienced project management team and delivered by fully trained and skilled operatives. Our capability also allows us to deal with any project – no matter how complex or large – without reliance on outside personnel or equipment. For example, we have successfully completed contracts with 2–120 personnel.

STRENGTH IN DEPTH

Pyeroy Specialist Asbestos Removal & Management Services is part of the Pyeroy Group of companies which offers a range of repair and protection services to the offshore, marine and construction industries. Founded in 1973, the Group offers unrivalled management expertise and technical excellence in the following areas:

- Surface preparation
- Coatings application
- Thermal metal coatings
- Hydro-jetting
- Tank cleaning
- New build projects
- Drydock/repair
- Duct cleaning
- On-board maintenance
- Thermal/acoustic insulation
- Red lead removal services
- Fire protection
- Containments
- Flooring/screeding
- Pre-cast concrete
- Concrete repairs
- Specialist and general cleaning
- Refurbishment
- Painting and decorating
- Workshop facilities for in-house coatings

Direct access to other group services including painting scaffolding, specialist access systems and industrial cleaning gives Pyeroy a single source project capability.
